This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Devise a recommendation algorithm based on latent factor model.
- combines latent factors and ℓ_2 norm to formulate the recommendation problem as a k-nearest-neighbor problem, in which we further use localitysensitive hashing (LSH) to reduce search time complexity.
- Speedup the retrieval by 5X-313X on three data sets used in the experiments.
