Salient object detection via color and texture cues

Qing Zhang, Jiajun Lin, Yanyun Tao, Wenju Li, Yanjiao Shi

PII: S0925-2312(17)30388-0
DOI: [10.1016/j.neucom.2017.02.064](https://doi.org/10.1016/j.neucom.2017.02.064)
Reference: NEUCOM 18138

To appear in: *Neurocomputing*

Received date: 3 July 2016
Revised date: 7 February 2017
Accepted date: 24 February 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new boundary selection measure is proposed to reduce the foreground noise
- AP clustering is applied to saliency computation within manifold ranking framework
- Color and texture cues are utilized to capture more image information
- Experiments have been carried out on ASD, ECSSD and DUT-OMRON datasets
