This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Deployment of an open sensorized platform in a smart city context

Sergio Trilles, Andrea Calia, Joaquín Torres-Sospedra, Raúl Montoliu, Óscar Belmonte, Joaquín Huerta

Highlights:

- *Integration of an open hardware sensorized platform in a smart city context.*
- *GIScience standards and solutions have been applied to enhance interoperability between IoT and smart city solutions.*
- *Applying for monitoring environmental meteorological and air quality phenomena.*
- *Offering a client in order to make decisions over data provided by sensors.*
