

## Accepted Manuscript

Deriving scientific workflows from algebraic experiment lines: A practical approach

Anderson Marinho, Daniel de Oliveira, Eduardo Ogasawara, Vitor Silva, Kary Ocaña, Leonardo Murta, Vanessa Braganholo, Marta Mattoso

PII: S0167-739X(16)30276-X  
DOI: <http://dx.doi.org/10.1016/j.future.2016.08.016>  
Reference: FUTURE 3139

To appear in: *Future Generation Computer Systems*

Received date: 11 November 2015

Revised date: 28 July 2016

Accepted date: 22 August 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Highlights

- Adapting software product line concepts to modeling scientific experiments
- Formalization of the main concepts of experiment lines: variability and optionality
- Supporting different levels of abstractions on scientific experiment management
- A tool for the experiment line derivation process exploring the formal concepts and different abstraction levels
- Exploring mappings on different levels while representing real scientific workflows with their life cycles
