Finding exact hitting set solutions for systems biology applications
using heterogeneous GPU clusters

Danilo Carastan-Santos, Raphael Y. de Camargo, David C. Martins Jr.,
Siang W. Song,
Luiz C.S. Rozante

PII: S0167-739X(16)30022-X
DOI: <http://dx.doi.org/10.1016/j.future.2016.02.009>
Reference: FUTURE 2962

To appear in: *Future Generation Computer Systems*

Received date: 15 August 2015
Revised date: 18 December 2015
Accepted date: 17 February 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

***Highlights**

- The algorithm works for Hitting Set Problems (HSP) with thousands of variables.
- A preprocessing sorting procedure speedups the HSP algorithm 2.48 times.
- The GPU algorithm is up to 7.8 times faster than a parallel ten-core CPU version.
- The multi-GPU version load-balances the work among devices on heterogeneous GPUs.
- The algorithm on 8 GPUs runs 118.5 times faster than the original in a ten-core CPU.
