This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- First fully polynomial-time approximation scheme (FPTAS) for the parametric knapsack problem without additional requirements on the input data.
- First strongly polynomial FPTAS for the parametric knapsack problem.
- Proof that the problem reduces to a polynomial number of evaluations of any FPTAS for the non-parametric problem.
