This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We model the run time of different types of graph-processing systems.
- We design new graph-partitioning policies that address important challenges.
- We report comprehensive results about the performance of partitioning policies.
- We discuss the coverage of our model and method, and the design of future policies.
