This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

***Highlights (for review)**

- Meta-heuristic algorithms explored for workflow scheduling in clouds
- An improvement proposed to the meta-heuristic algorithms
- An augmented variation of Shuffled Frog Leaping Algorithm (ASFLA) formulated
- Obtained solutions are execution cost optimal and also meet deadline constraint.
- ASFLA outperforms Particle Swarm Optimization and SFLA
