This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We performed a case study on the assessment of software measurement programs on 4 organizations within a large international communication company.
- We investigate quality threats to these assessments that arise due to knowledge distribution by comparing answers from different interviewees.
- We come up with a first list of reasons for mistakes during the assessment and provide lessons learned and support for improvement of the assessment.
- Furthermore, we investigate how measurement programs differ between organizations of the same company trying to identify potentials for knowledge transfer.
