This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- General non-procedural approach to graphical analysis of two-dimensional structures
- Enables interactive manipulations of the force diagram
- Presents derivation of the required Jacobian matrix
- Shows that the null space of the Jacobian matrix contains alternative solutions
- Presents how to use as a back-end for interactive graphic statics applications
