This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Research Highlights:

- A novel method to identify the closest directionally balanced neighboring point set
- Balanced neighborhood of points expandable to include more points
- Effectiveness validated via comparison with existing methods
