This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A taxonomy to classify reach, cardinality and refinement on out-of-reach selections.
- We propose PRECIOUS, a novel out-of-reach selection technique.
- PRECIOUS employs an iterative progressive refinement strategy in Virtual Reality.
- User evaluation comparing PRECIOUS against state-of-the-art out-of-reach approaches.
- PRECIOUS is a versatile approach, combining accuracy with consistent selection times.
