This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We state a vessel structure-based atlas selection to improve pancreas segmentation.
- Two types of applications of the vessel structure are explored.
- Proposed segmentation pipeline was evaluated on 150 CT volume data.
