This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Phishing Environments, Techniques, and Countermeasures: A Survey

AHMED ALEROUD, YARMOUK UNIVERSITY, JORDAN

LINA ZHOU, UNIVERSITY OF MARYLAND, BALTIMORE COUNTY

Ahmed AlEroud is an Assistant Professor of Computer Information Systems at Yarmouk University in Jordan. He holds degrees in Information Systems (Ph.D. and M.S.) from the University of Maryland, Baltimore County, and Software Engineering (B.S.) from Hashemite University in Jordan. He was a Visiting Associate Research Scientist at the University of Maryland, Baltimore County working on Cyber Security research projects. His research work focuses on Cyber-security, Data mining for privacy preserving network data analytics, and Detection of Social Engineering Attacks.

Lina Zhou is an Associate Professor of Information Systems, University of Maryland, Baltimore County. Her research aims to improve human decision making and knowledge management through the design of intelligent technologies and understanding of human behavior. Her current research interests include deception detection, natural language processing, mobile web adaptation, ontology learning, and online social networks. Dr. Zhou has authored and/or co-authored over 50 referred articles in journals such as Journal of Management Information Systems, MIS Quarterly, Communications of the ACM, Information & Management, IEEE Transactions on Knowledge and Data Engineering, Decision Support Systems, International Journal on Human-Computer Studies, Group Decision and Negotiation, and Small Group Research. She serves on the editorial board of six international journals. She is a member of UMBC Center for Cybersecurity.

### Abstract

Phishing has become an increasing threat in online space, largely driven by the evolving web, mobile, and social networking technologies. Previous phishing taxonomies have mainly focused on the underlying mechanisms of phishing but ignored the emerging attacking techniques, targeted environments, and countermeasures for mitigating new phishing types. This survey investigates phishing attacks and anti-phishing techniques developed not only in traditional environments such as e-mails and websites, but also in new environments such as mobile and social networking sites. Taking an integrated view of phishing, we propose a taxonomy that involves attacking techniques, countermeasures, targeted environments and communication media. The taxonomy will not only provide guidance for the design of effective techniques for phishing detection and prevention in various types of environments, but also facilitate practitioners in evaluating and selecting tools, methods, and features for handling specific types of phishing problems.

**Keywords:** Phishing; Social engineering; Phishing detection; Mobile phishing; Social Networks phishing; Honeypots; Ontology.
