This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Event filtering using similarity between incoming events and a set of beacon events
- Similarity is calculated using the information content of event attribute values
- Domain-agnostic approach with distributed operation for scalability
- Use of caching to handle infinite streams without windowing techniques
- Approach achieves high recall and reduction scores when applied to benchmark cases
