A Multivariate and Quantitative Model for Predicting
Cross-application Interference in Virtual Environments

Maicon Melo Alves, Lúcia Maria de Assumpção Drummond

PII: S0164-1212(17)30069-9
DOI: [10.1016/j.jss.2017.04.001](https://doi.org/10.1016/j.jss.2017.04.001)
Reference: JSS 9949

To appear in: *The Journal of Systems & Software*

Received date: 23 October 2016
Revised date: 13 March 2017
Accepted date: 2 April 2017

Please cite this article as: Maicon Melo Alves, Lúcia Maria de Assumpção Drummond, A Multivariate and Quantitative Model for Predicting Cross-application Interference in Virtual Environments, *The Journal of Systems & Software* (2017), doi: [10.1016/j.jss.2017.04.001](https://doi.org/10.1016/j.jss.2017.04.001)

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Analysis of interference of co-located applications in clouds
- Proposal of a multivariate and quantitative cross-interference prediction model
- Experimental analysis of our prediction model by using real HPC applications
