Incorporating architecture-based self-adaptation into an adaptive industrial software system

Javier Cámara, Pedro Correia, Rogério de Lemos, David Garlan, Pedro Gomes, Bradley Schmerl, Rafael Ventura

PII: S0164-1212(15)00211-3
DOI: [10.1016/j.jss.2015.09.021](https://doi.org/10.1016/j.jss.2015.09.021)
Reference: JSS 9592

To appear in: *The Journal of Systems & Software*

Received date: 21 October 2014
Revised date: 24 February 2015
Accepted date: 17 September 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlight

- We incorporate architecture-based self-adaptation (ABSA) in a legacy adaptive system.
- ABSA can improve original adaptation behavior.
- ABSA facilitates automating complex human-driven adaptations.
- ABSA demands upfront investment but improves maintainability.
