An improved genetic algorithm for task scheduling in the cloud environments using the priority queues: formal verification, simulation, and statistical testing

Bahman Keshanchi , Alireza Souri , Nima Jafari Navimipour

PII: S0164-1212(16)30106-6
DOI: [10.1016/j.jss.2016.07.006](https://doi.org/10.1016/j.jss.2016.07.006)
Reference: JSS 9798

To appear in: *The Journal of Systems & Software*

Received date: 26 November 2015
Revised date: 3 June 2016
Accepted date: 5 July 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Elitism technique with unusual selections is adopted to evade premature convergence.
- Statistical analyzes on the different randomly generated graphs are done.
- The proposed technique is translated into a verifiable behavioral model.
