This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- We propose a procedure for extracting comparison matrices from informal product descriptions
- We evaluate our proposal against numerous categories of products mined from BestBuy
- Matrices exhibit numerous comparable information and can supplement or even refine technical descriptions
- A user study shows that our automated approach retrieves a significant portion of correct information
- Users can compute, control, edit and refine matrices in a Web environment called MatrixMiner
