Skin Lesion Computational Diagnosis of Dermoscopic Images:
Ensemble Models based on Input Feature Manipulation

Roberta B. Oliveira , Aledir S. Pereira , João Manuel R.S. Tavares

PII: S0169-2607(17)30277-8
DOI: [10.1016/j.cmpb.2017.07.009](https://doi.org/10.1016/j.cmpb.2017.07.009)
Reference: COMM 4459

To appear in: *Computer Methods and Programs in Biomedicine*

Received date: 3 March 2017
Revised date: 18 June 2017
Accepted date: 19 July 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- An effective computational diagnosis system for dermoscopic images;
- Ensemble classification models based on input feature manipulation;
- Feature subset selection from the shape properties, colour variation and texture analysis;
- Experiments focused on skin lesion classifications using ensemble algorithms.
