Mixed convection peristaltic motion of Copper-water nanomaterial with velocity slip effects in a curved channel

T. Hayat, S. Farooq, A. Alsaedi

PII: S0169-2607(16)30995-6
DOI: [10.1016/j.cmpb.2017.02.006](https://doi.org/10.1016/j.cmpb.2017.02.006)
Reference: COMM 4350

To appear in: *Computer Methods and Programs in Biomedicine*

Received date: 19 September 2016
Revised date: 20 January 2017
Accepted date: 8 February 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Copper-water nanomaterial in peristalsis is modeled.
- First order velocity slip conditions are considered.
- Heat generation/absorption is presented.
- Heat transfer rate at upper wall of the channel is also discussed.
