This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Integrating ride-sharing and public transit can significantly enhance urban mobility.
- Efficient ride-matching technology for an integrated system can be developed.
- Driver willingness to accommodate more than one rider is critical for success.
