This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- New evolutionary algorithm for solving the Orienteering Problem.
- It includes a new node inclusion heuristic and adapted Edge Recombination crossover.
- Compared with Branch-and-Cut, GRASP with PR and 2-Parameter Interactive Algorithm.
- Competitive results for medium-sized instances up to 400 nodes.
- Outstanding results for large-sized instances up to 7397 nodes.
