This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We study a practical variant of the vehicle routing problem with compartments.
- We propose a heuristic solution using tabu search embedded in iterated local search.
- We report results of experiments which analyze the heuristic performance in detail.
- We find that the proposed approach dominates existing approaches in nearly all cases.
- We further find that allowing split demands have a limited effect.
