This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A mixed method approach supports decision making for offshore wind farm installation.
- An optimisation tool identifies the optimal sequencing of installation operations.
- A simulation tool identifies robust start-dates with respect to seasonality.
- A case study installation is investigated to demonstrate this mixed method approach.
