Impact of Priority Sequencing Decisions on On-Time Probability and Expected Tardiness of Orders in Make-To-Order Production Systems with External Due-Dates

Miray Öner-Közen, Stefan Minner

PII: S0377-2217(17)30489-7
DOI: [10.1016/j.ejor.2017.05.042](https://doi.org/10.1016/j.ejor.2017.05.042)
Reference: EOR 14470

To appear in: *European Journal of Operational Research*

Received date: 8 December 2015
Revised date: 14 May 2017
Accepted date: 20 May 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The priority sequencing problem is modeled as a Markov decision process.
- The objective function is the sum of a fixed and a variable cost of tardiness.
- It is possible to achieve near optimal performance by employing simple rules.
- Increasing fixed cost deteriorates performance of the earliest-due-date-first rule.
- Making decisions upon order completion provides further improvement potential.
