Additive consistent interval-valued Atanassov intuitionistic fuzzy preference relation and likelihood comparison algorithm based group decision making

Shuping Wan , Feng Wang , Jiuying Dong

PII: S0377-2217(17)30450-2
DOI: [10.1016/j.ejor.2017.05.022](https://doi.org/10.1016/j.ejor.2017.05.022)
Reference: EOR 14450

To appear in: *European Journal of Operational Research*

Received date: 11 July 2016
Revised date: 7 May 2017
Accepted date: 11 May 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The likelihood of interval-valued Atanassov intuitionistic fuzzy value.
- Consistency of interval-valued Atanassov intuitionistic fuzzy preference relation.
- Two special interval fuzzy preference relations are extracted.
- Obtain the priority weights by a parametric linear program.
- Construct an optimization model to derive decision makers' weights.
