A note on second order cone programming approach to two-stage network data envelopment analysis

Chuanyin Guo , Fajie Wei , Yao Chen

PII: S0377-2217(17)30529-5
DOI: [10.1016/j.ejor.2017.06.011](https://doi.org/10.1016/j.ejor.2017.06.011)
Reference: EOR 14493

To appear in: *European Journal of Operational Research*

Received date: 5 April 2017
Revised date: 2 June 2017
Accepted date: 5 June 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Global solution is guaranteed for non-linear network data envelopment analysis.
- Computational burden is reduced by solving a single cone programming problem.
- Multiplicative efficiency aggregation can be solved in general two-stage networks.
