This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We develop a hybrid of adaptive large neighborhood search and tabu search for the order-batching problem.
- The algorithm shows convincing performance in comparison to the competitors from the litera- ture.
- The algorithm solves large-scale instances with reasonable run-times and good scaling behavior and robustness.
