This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

Otr

- We consider a single machine with family setups and minimise maximum lateness
- We develop a novel integer programming model with a strong lower bound
- We prove our bound gap grows sub-linearly with the number of jobs
- We present new approximation algorithms that improve on existing results
- We solve much larger problems than have been solved before
