This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Fuzzy decision fusion models are applied to modeling loss-given-default for the first time.
- The proposed techniques have higher accuracy than other methods.
- Improved predictive accuracy by adding the PCs from 104 macroeconomic variables.
- Box-Cox transformation of macro variables does not improve the prediction accuracy.
