Improved Local Search Approaches to Solve Post Enrolment Course Timetabling Problem

Say Leng Goh, Graham Kendall, Nasser R. Sabar

PII: S0377-2217(17)30075-9
DOI: [10.1016/j.ejor.2017.01.040](https://doi.org/10.1016/j.ejor.2017.01.040)
Reference: EOR 14221

To appear in: *European Journal of Operational Research*

Received date: 12 April 2016
Revised date: 29 November 2016
Accepted date: 26 January 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Tabu Search with Sampling and Perturbation is efficient in finding feasible solution.
- Simulated Annealing with Reheating eliminates extensive tuning and scalable (runtime).
- It consists of a novel neighbor examination, local optima detection and reheating.
- New best known results for many instances.
