An Improved Method for Forecasting Spare Parts Demand using  
Extreme Value Theory

Sha Zhu, Rommert Dekker, Willem van Jaarsveld, Rex Wang Renjie,  
Alex J. Koning

PII: S0377-2217(17)30103-0  
DOI: [10.1016/j.ejor.2017.01.053](https://doi.org/10.1016/j.ejor.2017.01.053)  
Reference: EOR 14234

To appear in: *European Journal of Operational Research*

Received date: 24 November 2015  
Revised date: 27 January 2017  
Accepted date: 31 January 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- We study inventory control when relatively limited historical demand is available.
- Our new method combines extreme value theory with an empirical forecasting method.
- We analyse the applicability of different service measures in our method.
