This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We consider the single and multi-depot Capacitated Ring-Star Problem
- The problem arises in telecommunication networks design and transportation planning
- We investigate new pricing strategies for computing tight lower bounds
- We prove the effectiveness of the lower bounds through computational results
