This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We presented a lexicographic extension of the reference point method
- The method presented features a priori specification of multiple reference points
- The method presented features novel piecewise linear partial achievements
- The method presented automates treatment planning for (prostate) cancer patients
- The method presented improves the time-efficiency of our clinical workflow
