This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Ramp-rate withholding analysis in markets with simultaneous or sequential bidding
- Studying the effect of competition structure on generators' strategic behavior
- One- and two-stage equilibrium models reflect two different market setups
- Closed-form solutions of equilibrium models demonstrate withholding
- The models are extended to portfolio bidding and bidding under uncertainty
