This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- A methodology for determining an effective subset of heuristics in hyper-heuristics.
- Use of fitness landscape metrics and non-parametric statistics to rank heuristics.
- New adaptive iterated local search hyper-heuristic using dynamic multi-armed bandit.
- State-of-the-art results in course timetabling including new best-known solutions.
