Accepted Manuscript

Circulation Network Design for Urban Rail Transit Station Using a PH(n)/PH(n)/C/C Queuing Network Model

Juanxiu Zhu , Lu Hu , Yangsheng Jiang , Afaq Khattak

PII: S0377-2217(17)30065-6
DOI: 10.1016/j.ejor.2017.01.030
Reference: EOR 14211

To appear in: *European Journal of Operational Research*

Received date: 25 February 2016
Revised date: 18 January 2017
Accepted date: 18 January 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- A queuing network model with feedback is developed for circulation network
- A matrix geometric and analytic scheme algorithm is developed to solve the model
- A optimization model with the blocking probability control is proposed
- A network-node optimization algorithm is extended to solve the optimization model
