This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We developed an improved integer programming formulation for generalized educational timetabling.
- We proposed several new cuts, preprocessing techniques and reformulations for educational timetabling.
- Our work generated several new best known lower and upper bounds for timetabling.
