This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The extended goal programming model is enhanced to cover a decision network
- The effect of multiple stakeholders levels of non-compensation is analysed
- The effect of the level of centralisation of decision making is analysed
- The methodology is demonstrated on an renewable energy planning model
