This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The proposed method generates a set of unidentified equality constraints (if any) for IP problems.
- An MIP model is designed to check if there is an unidentified constraint satisfying problem specific criteria.
- A set of unidentified equality constraints for Base polytope are derived.
- Two TSP models are compared and strengthened with the help of newly identified equality constraints.
