This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- The replenishment problem is an extension of the online time series search problem.
- Reservation price algorithms can be adapted to the a-priori given in-formation
- We answer the question how much to order at the optimal point in time.
- The decision making of our algorithms is explored experimentally on crude oil prices.
- The price variation range is sufficient to solve the online replenishment problem optimally.
