This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We analyze energy intensity in Japan for the period 1973-2006.
- We introduce a new method which corrects a bias in traditional energy intensity.
- Our measure shows higher aggregate energy intensity after 1986.
- We also measure corrected energy intensities at the sectoral level.
