This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- This paper determines the optimum replenishment period, level and order quantity
- Considers probabilistic replenishment interval with announced price increase
- Partial backordering is allowed and buyer is aware of the replenishment order level
- The model is solved under general distribution with closed-form solution
- The problems with two distributions perform well for special sale offer before price hike
