This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Single-item lot sizing problem is studied under a capacity reservation contract
- Batch deliveries are allowed and the overall replenishment cost is stepwise
- Four NP-hard cases are identified and an efficient FPTAS is proposed
- Pseudo-polynomial time dynamic programming algorithm is given for the general case
- Polynomial time algorithms are proposed under restricted parameters
