This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We consider the problem of integrating routing and loading.
- We compare one integrated and three not integrated solution approaches for the 2L-CVRP.
- We quantify the potential benefit that can be achieved solving the 2L-CVRP directly.
- We analyze the worst-case performance of the not integrated solution approaches.
- We show empirically the importance of the integration for this problem.
