This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- We discuss the decomposition of economic inefficiency when the DDF is used.
- The allocative component derived from the DDF is compared with Farrell's approach.
- We show that both approaches yield different allocative efficiency terms.
- The implications of the multiplicative and additive approaches are discussed.
