This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new preference aggregation method is proposed based on the preference graph.
- An application to voting and to the group decision in general is given.
- The method generalizes the Borda count and the Condorcet approach as well.
- The properties of monotonicity, clone independence and consistency are discussed.
- Applications to Eurovision Song Contest and Cookie type election are given.
