Title: Multiobjective Coverage Path Planning: Enabling Automated Inspection of Complex, Real-World Structures

Author: K.O. Ellefsen H.A. Lepikson J.C. Albiez

PII: S1568-4946(17)30471-4

DOI: <http://dx.doi.org/doi:10.1016/j.asoc.2017.07.051>

Reference: ASOC 4379

To appear in: *Applied Soft Computing*

Received date: 1-8-2016

Revised date: 20-7-2017

Accepted date: 25-7-2017

Please cite this article as: K.O. Ellefsen, H.A. Lepikson, J.C. Albiez, Multiobjective Coverage Path Planning: Enabling Automated Inspection of Complex, Real-World Structures, *Applied Soft Computing Journal* (2017), <http://dx.doi.org/10.1016/j.asoc.2017.07.051>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- We optimize inspection plans for complex 3D structures with multiobjective evolution
- The method optimizes inspection coverage and energy usage simultaneously
- Our inspection path planning method is compared to other state-of-the-art techniques
- Traditional methods do not generate good plans on structures with hidden parts
- In contrast, our method handles occlusions and hidden parts gracefully
