This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Entropic Simplified Swarm Optimization for the Task Assignment Problem

Chyh-Ming Lai^{1,*}, Wei-Chang Yeh², and Yen-Cheng Huang²

Highlights

- The first work to apply simplified swarm optimization to the task assignment problem.
- Entropy is adopted to describe the uncertainty level of assigned tasks; the task with higher uncertainty then has more chance to be reassigned.
- ELS encourages solutions to exploit more promising neighbors since the search is not only arbitrary.
